22 period. Such written statement shall be carried with the Horse during the  
presumed forty-eight (48) hour recovery period, and provided to the Department

## MEMORANDUM

June 10<sup>th</sup>, 2014

**To: Members of Common Council**

**From: Belinda Lewis, Director  
Animal Care and Control**

**Subject: Proposed Ordinance Repeal/ Replace: Chapter 91**

### Why Now?

- We've been reviewing areas of the ordinance for a little over a year. There were aspects that the courts wanted to see clarified, we needed language to be consistent throughout and it's important that our ordinance doesn't conflict with the new local zoning ordinance.

### Ordinance High Points Include:

- 91.105 (4) allows us to refuse a euthanasia directive from an owner for a healthy, behaviorally sound animal.
- Courts can order restitution for victims of dog bites.
- We define animal hoarding to allow specific interventions with the understanding mental health is involved.
- Allows for the creation of a court deferral program for minor violations.
- Overall, a clean-up of semantics and language consistency throughout the ordinance.
- This is a large repeal/replace package. Please refer to the "Summary of Substantive Changes" attached and to the actual ordinance sections for specifics.

Additionally, there's a new area to the ordinance that hasn't been possible in the past in Fort Wayne. But now, we are fortunate to have a strong partnership with two local non-profits – HOPE for Animals and the ACSPCA – which makes it possible to launch a Community Cats program, aimed at saving the lives of cats and bettering our neighborhoods.

**The Community Cats Program** is a win; win for neighborhoods and for cats.

- First of all it's a program that uses non-tax based money to enact;
- The overall goal is to diminish the volume of stray cats in our community.
- Once it's in place, fewer cats will be euthanized. And, quite honestly we have years of data that shows euthanizing cats is not solving the problems;
- The Community Cat approach of surgically sterilizing free roaming cats will reduce nuisance problems caused by stray cats, prevent reproduction and reduce the spread of illness.
- We have statewide examples that show a Community Cats Program is quite successful - especially when non-profits take the lead and partner with a municipality.

## Substantial changes to individual sections

### 91.034: Dog Bite Injuries

Changed the term “Potentially Dangerous Animal” to “Dog Bite Injuries”; added a level in dog to dog bite cases so we no longer make the leap from minor bites to major bites without a moderate category.

### 91.037: Prohibited Training Methods

Added language to exempt electronic perimeter fences and training collars when properly fitted, installed, maintained, and activated.

### 91.040: Habitual Animal Offender

Provides the court with the opportunity to limit animal ownership for life (currently a determinant period of time)

### 91.041: Community Cats (*see full summary of this programming below*)

- Creates the opportunity for a Free Roaming cat with no Acceptable Identification to be processed as a Community Cat and returned to its area of known resources to minimize the stray population in the area and prevent euthanasia.
- Requires sterilization, ear-tipping, microchipping, 3 yr rabies vaccination, and documentation with the Department of all Community Cats.
- Requires pre-scanning to ensure it is not a privately owned cat

The stated purpose of the community cat program is to "minimize the stray population of feral cats by sterilizing the cat(s), vaccinating it (them) for rabies with a 3-year booster and microchipping and ear notching it (them) for easy identification. Then the cat (s) would be returned to its location of origin".

The role of a veterinarian and the community health officials is to educate the council and this coalition of possible negative consequences of enacting these changes to the current ordinance.

First, a neutered male feral cat will lose his dominance because of the effects of the castration. He will lose his hormonal, physiological, and behavioral dominance. New dominant male cats will take his place because it is impossible to neuter every feral cat.

Secondly, the plan to vaccinate for rabies with a 3-year booster requires the ability to recapture all of the released cats and vaccinate them again. This does not address any of the other health issues of these cats and creates a significant public health risk of not knowing the vaccinated status of ear notched cats. There is a veterinarian from Texas who believes that the trap, neuter, and release method of dealing with feral cats produces disease factories that endangers the lives of tradition pets and the public. That veterinarian is considered the foremost authority for Feline Internal Medicine (Dr. John R. August, B. Vet. Med., M.S, M.R.C.V.S., Diplomate A.C.V.I.M., Professor of Feline Internal Medicine, Dept. Of Small Animal Medicine and Surgery, College of Veterinary Medicine, Texas A & M University, College Station, Texas).

Thirdly, this proposed program requires adding nutritional support for feral cats because even though they may consume and create a threat to some of our wildlife, they will still need additional nutritional support. Feeding feral animals creates an imbalance in the wildlife population. Feral cat feeding locations will also feed wildlife that may include raccoons, opossum, skunks, rats, and possibly coyotes which will increase new potential health threats to our community.

In conclusion, the goal of veterinarians and health professionals is to improve and protect life. Our goal is not to euthanize animals; however, it may include euthanization when problems are created that cannot be resolved by any other means. Neutering alone does not always protect our community. The proposal of trap, neuter, and release is not supported by science or medical professionals as an acceptable method of controlling the feral cat population.
